Hiring Manager & Talent Acquisition Team

Application for Junior Software Developer / Web Developer Role

Dear Hiring Manager,

I am writing to express my strong interest in joining your organization as a Software Developer. As a Computer Science graduate from the College of Mary Immaculate with practical development experience from my internship at JCAS Logistics, I specialize in building dependable web applications, clean REST APIs, and structured relational database systems.

My core full-stack stack centers on React, modern JavaScript, Node.js, Express, PHP, Laravel, and relational databases including MySQL and PostgreSQL. In my recent project, Invitr, I built a full-stack event RSVP and guest management web platform using Laravel 12, Blade, MySQL, and Tailwind CSS. The application handles guest attendance tracking, automated email notifications via Brevo SMTP, responsive admin analytics, and unit testing with PHPUnit. In addition, I have hands-on experience building single-page applications and RESTful endpoints, such as the Conexus social platform with React and Vite.

I adhere to disciplined software development practices, including standard Git workflows, modular component architecture, and automated continuous integration checks. Alongside relational database schema design, I focus on building accessible user interfaces that meet WCAG AA standards. To maintain fast delivery cycles, I incorporate modern developer tools into my daily workflow to accelerate prototyping and debugging while keeping the underlying codebase maintainable, secure, and clean.

During my software developer internship at JCAS Logistics, I collaborated with fellow developers to build internal HR modules, driver companion tools, and operations dashboards. That experience strengthened my ability to translate functional requirements into working software, collaborate in cross-functional team environments, and solve practical production problems under real-world delivery schedules.

I am eager to contribute my hands-on background in web development, API integration, and database engineering to your engineering team. Thank you for your time and consideration. I welcome the opportunity to discuss how my technical skills, collaborative mindset, and work ethic align with your development goals.

Sincerely,

Nathaniel Faborada
